1 Introduction

This package provide a simple way to create and custom the official flyleaf of the University of Toulouse. It is very usefull for PhD student who want write their PhD manuscript in LaTeX and insert the official flyleaf provide by the University in a private and not standard format. Main use of this package is similar to the standard \maketitle with some stuff define in the preambule of the LaTeX 2_{ε} document and a single command (\makeflyleaf) used in the body of the document to generate the flyleaf page.

^{*}This manual corresponds to $pdgunivtls.sty\ v1.1$, dated 22 March 2013.

2 Required package

```
\LaTeX a recent \LaTeX installation \geq 2011.
```

shadowtext package: shadowtext.sty v0.3, dated 2012/05/07

3 Preamble

In the preamable, you need to define all the contains of the flyleaf page information using very simple commands. But before that you need to load the package using the simple commande line: \usepackage[<option>]tlsflyleaf. Option are very important and allow you to define the establishment name and the doctoral school to be print on the flyleaf (for more details on package option, see section 5).

```
\texttt{\title} French version of the Title of the PhD.
```

 $\defencedate{< date>}$ defence date.

 $\label{laboratory} \$ name of the laboratory.

 $\arrowvert author {< name >} name of the author.$

 $\noindent \{ < integer > \}$ define the total number of 'boss' to be printed (hereafter labeled as '\npeople'). Need to be in [1,2,3,...].

<category> should be select in ['boss', 'referee', 'judge']

<number> is the rank for printing the person. Only number $\leq |$ npeople will be printed

<name> First name and las name of the people

<status> choose in "chargé de recherche", "professeur d'université" . . .

<other> What ever string you want to add (laboratory, jury member place...).

This command need to be used with the \nboss, \njudge and \nreferee. Each \npeople command define the total number of people in each status to be printed.

\cotutelle{\left\(\) establishment \rangle} define the international 'cotutelle' establishment name.

Don't use this command if you are not in 'cotutelle'.

See sections 6 for a simple but powerfull example.

4 Inside the document

Like for the standard command \maketitle, you only need to call the \makeflyleaf command to create the flyleaf page.

5 Package options

emptysheetbefore Create two empty pages (that mean one sheet) before the flyleaf (see emptypageafter).

emptypageafter Insert one empty page after the flyleaf.

emptysheetbefore and emptypageafter are very usefull for example in the case of writing a book with odd and even pages. That allow an empty sheet before the flyleaf. Default behavior is to not insert those empty pages.

- Ets=<value> Define the establishment name in the flyleaf. No option given print a red message on the flyleaf. Value allowed for this option are provided in a full list in section 6.1.
- ED=<value> Define the doctoral school and speciality. No option given print a red message on the flyleaf. A full list of value allowed for ED is provided in section 6.2.
- ED2=<value> Allow the definition of a 'double mention' (second speciality). This option is optional: no option nothing done. The full list of value allowed is the same as for ED (see section 6.2.
